## TO STOP BLEEDING.

TREATMENT NEEDED IN THE CASE OF ACCIDENTAL HEMORRHAGE.

Valuable Hints for All Non-Professionals—When Arteries are Wounded. Bleeding From Veins—Improving a Tourniquet—The Physician.

When profuse hemorrhage from a wounded blood vessel occurs, the beholder, be he friend or stranger, is in many instances so terror-stricken he loses all presence of mind, and thus many lives have been sacrificed which might have been saved by timely intervention. In nearly all cases of hemorrhage much more apprehension is excited than is warranted. The amount of blood actually lost is generally much overestimated. There is a common expression, "a little blood makes a great show." This is quite true; for a small quantity will soil much clothing, and but little need be added to a basin of water to render it very high colored. It is well to remember that about one-eighth of the weight of the human body is blood; in other words, that, in a person of average size, there are from sixteen to eighteen pints. In health a pint—even a quart—of blood can be withdrawn from the vessels without injury, and doubtless in but few cases would a loss of one-third the entire amount contained in the body prove fatal.

From this statement it must not be inferred that when hemorrhage occurs treatment may be leisurely applied; far from it. The bleeding should in all cases be immediately arrested, if possible. The reader should know, however, how great a loss can be sustained without life being threatened, for it is often the fear of immediate death that is terrifying, and renders one powerless in such emergencies.

## WHEN ARTERIES ARE WOUNDED.

An artery is known to have been wounded when blood of a bright red color spurts out in jets, corresponding to the beats of the pulse. If a vein is opened, dark red blood flows from the wound in a steady stream. Bleeding from wounded arteries is in nearly all instances by far the most dangerous. In cases of hemorrhage at all profuse, firm pressure should be instantly made directly upon the bleeding part. The next step to take will depend upon the situation and character of the wound. If the injury is on either of the limbs, and is severe, it is always well to have the patient placed flat on his back, and the injured member elevated and supported by an assistant. During this procedure the bleeding must be prevented by unobstructed pressure. If a small artery has been cut, it will be known by the size of the jet which started out when the wound was received. In such cases, bandaging directly over the wound will often control the hemorrhage. A pad should be made a little larger than the cut, by folding or rolling firmly a piece of cloth. This, when ready, should be placed over the wound, and the fingers which have previously engaged it being quickly lifted up for the purpose, and as quickly should they remove their pressure on the pad. Over this a bandage can then be applied, a piece of about three or four inches wide, and five or six feet long, being used.

If the bleeding has entirely ceased, to wet and keep this bandage saturated with cold water, and the limb supported is all that there remains to do. If, however, the bleeding persists, then the treatment to be advised when a large artery is wounded must be employed. In such cases no attempt should be made to permanently close the wound by bandaging the wound, but between it and the body, around the limb, a firm bandage, twisted bandage, large cord or a piece of rubber tubing should be drawn tightly and tied in a knot, to shut off the supply of blood. Not until this is effectually done should pressure of the fingers on the bleeding part be relaxed. In cases where the wound is large and several small arteries are opened and pressure with the fingers does not control the bleeding, then the ligature should be applied above the injury. Bleeding from small veins is generally easily controlled by bandaging over the wound. When, however, important vessels are opened, it is sometimes the case with enlarged veins of the leg, then the blood should be cut off from the bleeding part by tightly bandaging, not between it and the body, but between the wound and the extremity. This simple law may be easily explained: the blood goes to the extremities through the arteries, but returns through the veins.

## IMPROVING A TOURNIQUET.

To control hemorrhage in some situations is more difficult than in others. If a large artery is opened above the knee or elbow, it is doubtful if a bandage can be drawn tightly enough to cut off the blood between the wound and the body without impairing a tourniquet. To do this is easy, however. A common household article can be tied loosely around the leg or arm and the stick taken up by twisting with a cane or stick until sufficient pressure is exerted to prevent the passage of blood to the wound. The advice of Dr. Hope is well worth remembering: "If you be by yourself in the field, and get a severe cut with a scythe, or in any sudden emergency, such as a railway accident, use the remedy which has saved many a life on the field of battle. Take a handful of dry earth, put this on to the wound and grasp tightly all you can call some assistance." As previously stated, in nearly all cases of hemorrhage from wounds there is no necessity for the alarm often shown, especially as fear often perverts the judgment of those who could much more serve the true interests of the sufferer by keeping cool and collected.

In all emergencies a physician should be immediately sent for. If the bleeding is controlled by pressure of the fingers, all other operations which follow can be done leisurely, as there is no urgent haste and none should be induced in bleeding from the nose, unless it be profuse and prolonged, requiring little interference. Professor Henry J. Bigelow's treatment for nosebleeds: Keep the head erect, place a basin under the chin for the blood to run into, and then the patient should take several deep inspirations, filling the chest fully at each breath. In most cases by this treatment the bleeding will soon cease. Holding the neck and face with cold water, or applying ice to the nose is often advantageous. Pinching the nose with cotton might be tried, but rarely will it prove effectual, for the blood usually flows back into the throat. In urgent cases a physician should be sent for.—Cor. Boston Herald.

## Looking over Bad Fruit.

Mr. Goodman was out in the kitchen helping his wife sort over a large quantity of partly decayed fruit, when a friend called to see him and asked if it wasn't hard work to keep at that business all day. "Oh, no," said he, "it's a great strain on the judgment."—New York Graphic.

## Ventilation for a Sick Room.

If a summer sick room has a fire place put a candle in it. The upward draught makes an excellent system of ventilation, especially if a window be left open to allow fresh air ingress.—Hall's Journal of Health.

Bob Ingersoll says: "No American can be truly happy unless he spends each year a little more than his income."

## Had the Same Effect.

"Mattie, Mattie," called an Omaha dame to her child, "I do wish you would play something besides Wagner. I am so sick of it." "I am not at the piano, ma," responded the daughter from an adjoining room. "Then who is it?" "Nurse and the baby."—Omaha World.

"EAGLE"  
Town-Site Company,

WICHITA, KAN.,

Have for sale, on line of WICHITA &amp; COLORADO RAILROAD north-west of Wichita, town lots at new towns of

MAIZE, 9 Miles from WICHITA.

COLWICH, 14 " WICHITA.

ANDALE, 20 WICHITA.

MT HOPE, 26 "

HAVEN, 33 1/2 "

ELMER, 42 1/2 "

Trains are now running regularly on Railroad from Wichita to Hutchinson.

These towns are in the best portion of

Sedgwick County, Kansas.

Maps of Towns and Prices can be had as hereinafter set forth:

At Wichita, call on N. F. Niederlander or Kos Harris;

At Maize, call on H. Lonsdale;

At Colwich, call on Geo. W. Steenrod;

At Andale, call on Bank of Andale.

P. H. Randall and W. S. Matkie, for Mt. Hope lots.

At Haven, call on Ash &amp; Charles.

At Elmer, call on J. A. Meyer.

Resident on said Addition.

## "Junction Town" Addition to Wichita!

This addition lies west of the city of Wichita, and immediately adjoining the Fifth ward in said city. West Douglas avenue runs through the center of the addition, and in the future growth of Wichita the lots on West Douglas avenue must become

## BUSINESS LOTS!

This addition was placed on the market in February 1886, and out of 700 lots there are only

125 LOTS LEFT 125

## SPECIAL ADVANTAGES

Of this addition to which the attention of those seeking investments is directed:

FIRST.—The land is higher than any part of the City on the east side by at least 15 feet, and the entire drainage is to the Big Arkansas River.

SECOND.—Garfield University, the State Christian College a building which, when completed, will cost over \$100,000 lies immediately south of the addition.

THIRD.—The Catholic society are building a college immediately west of this addition, the cost of which will be \$50,000, and this plant is to be added to from year to year.

FOURTH.—The Missouri Pacific R. R. will in a short time place shops on the addition, and a depot of W. &amp; C. and Ft. Scott R. R. will be placed on this addition inside of 30 days.

FIFTH.—The new Fifth Ward School building is completed, the cost of which is \$15,000.

SIXTH.—The street cars reach this addition, making it only 10 minutes time from west side to corner of Main st. and Douglas ave.

SEVENTH.—The fair ground lies immediately north of the addition.

LASTLY.—The addition is booming itself, and the facts prove it. The west side of the river is on top. All other additions are being bolstered up by PURE WIND. "WINDY WIND." The investments on the west side are booming the addition.
